

Capabilities

- *Custom Automation/Machine Design & Build*
- *Metal Stamping*
- *Custom Die Design & Build*
- *Metal Cold Forming*
- *Plastic Injection Molding*
- *Metal Plating*
- *ISO 9001 registered*
- *Class A MRP II facility*

Quality, Reliability, Service

APCOM's capabilities make our company unique for servicing OEMs in a variety of industries. **We understand product design, production processes, quality and value. Innovation, performance, and service** define our operations. We are continually seeking alliances, joint ventures and other relationships which provide synergy and opportunity.

Our team structure and corporate values allow APCOM to remain **flexible and focused**. Flexible enough to provide **small batch assembly**, as well as large volume production. Focused to provide individual attention and **quick response time**. We are capable of developing **prototype components in as little as six weeks**.

Automation has allowed APCOM to **more than double our production output** while keeping employee levels nearly the same. We maintain a **stable, loyal, empowered workforce** with a high level of employee satisfaction. Over 65% of our employees have been with us for more than five years. This means that we have the skill and expertise to ensure your expectations are met-on time.

In 1985, APCOM became a **certified Class A MRP II manufacturing facility**, one of the first in the United States. In January 1999, APCOM became **ISO 9001 registered**. ISO 9000 represents a set of international standards for quality processes and systems. ISO 9001 is the most stringent of all the ISO 9000 standards.

Apcom Inc.
125 Southeast Parkway
Franklin, TN 37068
