

# Gas Water Heating System Components

- *Manifolds, main burners, and pilot burners*
- *Meets stringent California low-NOX codes*
- *Custom design capability*
- *Just-in-Time shipping*

## Custom Capabilities, Low NOX, Low and High Input Burners

APCOM manufactures gas system components including **supply manifolds, pilot burners, pilot tubing, and main burners**. Components are often custom designed for our customers. We have the capability of producing metal tubing products in various end form, bend, and tube diameter configurations.

Our model PB-4 pilot burner is designed as a standing pilot for gas water heating and is avail-

able in both natural and L.P. gas configurations. The device is designed for use with 1/4" diameter aluminum tubing gas supply line.

Our patented radial port main burner can be fired at up to 50,000 btu/hr. Used in conjunction with proper water heater design, it has the ability to **pass stringent low NOX codes in California**.
