

## Custom Injection Molding

- *Mold design, building, and maintenance capabilities*
- *Rapid turnaround*
- *Broad range of materials, including thermosets*
- *Vertical and horizontal configurations*
- *Custom parts engineering*

### Imagine It. We'll Build It.

We have complete **mold design, mold maintenance, and mold building capabilities.** This lets us expedite a project from design through production.

APCOM has **plastic injection molding** presses ranging from 150 tons to 500 tons in horizontal and vertical configurations. We have the ability to **mold thermoset plastics** such as **phenolic compounds**, along with several different kinds of **thermoplastics**. This ability gives you new **flexibility in component design.**

Our **quality and service heritage** helps provide assurance that your components will be on time and perform the way you expect.

Our comprehensive capabilities mean we have total in-house control over your product's engineering and quality, giving you **extra assurance for on-time delivery.** And our process-oriented specialists work with your engineers to make sure that any part we design can be **seamlessly integrated into your current production systems.**
